

Guitar Amp
AG-03M
Operation Manual

Thank you for purchasing Aroma brand guitar amp AG-03M. AG-03M powers 5 Watt with guitar effects of distortion and clean. The amp is powerful to play music in FT card, and to amplify music from your computer linked by a USB line or music from external music player connected by an audio line. AG-03M also has functions of microphone input and recording. The solid belt clip strap on the amp back makes it easy to carry along, and is easy to install for an amp standing support.

If no link to AUX jack, the screen shows as Diagram 11. If the AUX jack connected, the screen shows as Diagram 12.
Press▶||button to start recording as Diagram 13; another press to pause recording as Diagram 14.
Press▶||button and hold for 2 seconds to stop recording and start playing what recorded automatically.
When you record, press and hold the EQ button to turn on or off guitar distortion effect. And press the EQ button to turn ON or OFF the recording sound. If you want to listen to the music in the same time when you record, an earphone is highly recommended to avoid possible noise. The recorded music files will be stored in the AMP file of TF card automatically by the name of rec0000.mp3. The music quality is 128k bps.

- !! NOTICE : Under modes of 1, 2 and 4, the amp enters mode 3 automatically if AUX jack connected.

5. USB Mode
Step one: Use the USB line in the amp package box to link your amp and your computer. And turn the ON/OFF knob to power on.
Step two: Your computer recognizes your amp and starts driver installing automatically. Both Windows and Mac system can install the driver and link to your amp.

When the amp success linking with your computer, the amp screen shows as below diagram.

After the computer and the amp linked in, you can play music at your computer and the music will get amplified by the amp. In the same time, your computer recharges the amp battery automatically.

- !! USING TIP :
- Under USB mode, turn ON/OFF knob to adjust music volume and press M button to enter other modes. Press▶||button to play/pause music, and◀◀button or▶▶button to select music backward or orward. All the other buttons have no function.
 - Under USB mode, press M button to enter modes of 1 to 4, but not to turn back mode 5. If you need to enter mode 5 (USB mode) again, please take off your USB line and then plug in again.
 - Under any mode of 1 to 4, linking USB line to a computer directs the amp to enter mode 5 (USB mode) automatically.

HOW TO RECHARGE BATTERY

- AG-03M can be recharged by two ways.
1. Computer. Link your amp to your compute by attached USB line in the package box. The computer will recharge your amp automatically.
 2. AC-DC Adapter. Use the attached USB line connecting to an AC-DC adapter, and then connect the AC-DC adapter to electricity jack. Please pay much attention to 5 voltage. Most of the mobile phone AC-DC adapters are available for your amp recharging.
During the process of battery recharging, the two half battery signs on the screen will be flashing. Once recharging finished, the two half battery signs on the screen stay solid. It takes about 6 hours to full recharge an exhausted battery.
!! NOTICE: Once that the battery signs flashing, please stop using the amp and recharge as soon as possible to avoid damaging the battery. If you plan not to use the amp for a long time, please store your amp after the battery is recharged full.
